- **Native:** This is the standard screen mode of your monitor. In this mode, objects appear onscreen as they do in print. Screen mode may accentuate the look of a particular type of image, depending on the object, but it can also result in an image that appears overly bright or somewhat washed out.
- **Grayscale:** Select this mode for a faded screen appearance. Objects appear somewhat dim, as they do in film or offset printing. A normal screen might screen this as a sepia image.
- **Grayscale with Black and White:** This is one of the most common screen modes, since it is the appearance of a print image in the computer. The image is displayed with all colors and organized into the grayscale aspect of the final print.
- **Black and White:** This type of screen mode, when used with grayscale or the whole-ton colors, is similar to printing an image. The screen displays black and white, along with colors that will be transferred into the print media. This mode is best with images that have a consistent black-and-white look.
