For photographers who want to organize, edit and store their photos with full RAW support, we suggest to get Lightroom on a Mac. If you prefer to work with your images in Camera RAW, then you can still use Lightroom Classic. And if you just want to work with your RAW files on your Mac, then Lightroom Classic will do the job. If you are technologically inclined, then you can look at the Mac or PC version of Lightroom Classic CC. However, the Mac version is probably the better choice, and we can advise you. What we loved most about Lightroom is the flexibility of the software. The interface and many-aspect-view in workflow has been updated here. Where else can you edit RAW, TIFF, JPEG, PSD, DNG and even merge formats in one comprehensive style? The program also gives you the opportunity to organize your data in a Catalog. Your images are categorized with tags and GPS locations, and the information can be shared with the online community and various social networks. If that is not enough and you are looking for more, you can always choose Adobe Camera Raw and Photoshop. You will also be able to work with the RAW Converter. Keep in mind that Photoshop, Lightroom Classic, and Lightroom App are all developed by Adobe. This is just a glimpse of what's to come in future releases of Photoshop, and we're just getting started. With better performance, a completely revamped UI, and a more intuitive workflow, we're sure you'll start to discover all the awesome features of Lightroom 5. We want you to enjoy it. For example, in some cases, a graphic designer can create a background for a print or display without having to supply an element for each of the hundreds of images. He or she can just use a single file for creating all the elements of the layout. The background will look good in the print. In order to do so, the designer must bring the background of the layout into Photoshop. After the backgrounds of all the elements of the layout are brought into Photoshop, it is a simple task that can be done in a short amount of time. The reason many editors use Photoshop is because it's more powerful than Lightroom, offering much more flexibility. However, for editing, as in Lightroom, stick to the standard for best results, as the master is always the master. The reason Lightroom is so popular today is because it is very easy to use, and it is the fastest way in which to edit your photos and move them around the board. But, ultimately, the standard is always the master. So, if you're editing in Photoshop, you should do so as you would in Lightroom, saving any changes to the master file. As a studio or freelance designer, Photoshop is a platform which has the potential to do almost anything, and that's why, despite it being so great, there is always room for improvement and additions. That is where Adobe now comes into the picture. This time, the focus is more on achieving the most out of Photoshop. In this era of technological revolution, Adobe has introduced several hardware changes — from a better design and program interface to mighty and powerful GPUs. In addition to giving users access to the new features in Photoshop, Adobe has also steadily improved other core functions including support for AI tools, changes to the previously unintuitive Photoshop Slideshow app and more.
